Technologies for the sustainable transformation of the chemical industry

Hydrogen and its derivatives are considered key technologies for the energy transition, enabling renewable energy to be stored and transported. Power-to-X technologies can be used to produce synthetic energy carriers such as methanol, ammonia and e-fuels, which are becoming increasingly important for industry, transport and international energy partnerships.

The web session provides insights into the latest technological developments, current PtX projects and the challenges involved in production, storage and distribution.

Target Group:

- Specialists and executives from the chemical, pharmaceutical, and plant and equipment manufacturing industries
- Managers in process engineering, production, engineering and project management
- Experts in energy supply, sustainability and decarbonization
- Specialists in hydrogen and Power-to-X technologies
